

Progress Report

- Increment 3 -

Group #27

1) Team Members

Nate Thomas. nit23a. Nate-Thomas-FSU

Julian Sierra // jds21q // juliandsierra

Carter Venclauskas. cv24i. cvenclauskas

2) Project Title and Description

Project Title: Lone

Description: Our group is making a video game very similar to video games like Super Metroid and Hollow Knight. This game will be built using Unity Engine and uses C# as raw scripting for those who can use visual studio code. We will be making the game very similar mechanics to the elements from Super Metroid. We will also be making custom sprites and maps for this game.

3) Accomplishments and overall project status during this increment

There are movement, camera, and shooting mechanics in place. The player has full animations for movement, falling, and aiming. There are textured tiles for level design. There is a save/load system. There are now 8 unique “rooms.” There is a main menu in place, with a credits section. Basic enemy system has been implemented. While many mechanics had to be dropped for the sake of time, the backbone of a game is in place. Player now has sprites/animations for all implemented mechanics.

4) Challenges, changes in the plan and scope of the project and things that went wrong during this increment

The scope of the project was reduced greatly. It was realized that there was not enough time and manpower to realize some of our previous desires. A boss fight was dropped for good (though it was always more of an “at the end, if we have the time” kind of thing). The number of and variety of levels was reduced, down to less than ten rooms and one environment type. Melee ability was removed, and while there is now an enemy script, proper enemy types with visuals were dropped as there is not enough time to implement those. Music was also cut.

Along the way, solutions and new features arose from tasks previously desired. Such as when planning for Main Menu UI, having interactive sounds for hovering and clicking over the buttons in the menu were not planned but implemented throughout the process.

5) Team Member Contribution for this increment

Nate Thomas

a. 2

b. RD: Section 4

c. IT: no contributions

**d. Refined player input to use input axis system for easy remapping and controller support.
Sprites/animations for player ledgegrabbing, adding sprites and logic for both legs and**

torso. Refined animation logic for aiming with torso. Added textures and tilemap for levels, including sand, rock, and water tiles. Added sprites for level interactables, such as doors, item pickups, and save points. Added audio components to the player for footsteps, footstep audio is tied to walking animation on legs.

- e. **No contributions to video or presentation.**

Carter Venclauskas

- a. **PR: 3, 4, 8**
- b. **RD: Section 1, 2, 3, 5, 6**
- c. **IT: Section 1, 2, 3, 4**
- d. **Camera system where camera follows player rather than matching their movement exactly (does not go past level boundaries). Level structure/building/level transitions. Object types that can be placed in a level. Ability-based progression system. System where different rooms are dynamically enabled and disabled, as well as basic Save/Load that interacts with progression. Implemented 8 unique levels with a progression path.**
- e. **Recorded and posted**

Julian Sierra

- a. **PR: Sections 4 & 7**
- b. **RD: Sections 5 & 7**
- c. **IT: n/a**
- d. **Committed proper aiming mechanics (45 degree octagonal arrow key decoupled aiming). Created MainMenu scene, logic, and UI. NewGame button will delete save file and load TestScene. Continue will load last save file. Credits brings in an opaque overlay screen. Implemented third-party font and sounds to Menu.**

6) Plans for the next increment

Increment 3, no future increments.

7) Stakeholder Communication

Hello Stakeholder,

The development team would like to be completely transparent with where our project stands.

After evaluating our timeline and resources, we made the decision to narrow the project's scope to deliver a functional product rather than a creative but incomplete one. Specifically, we've consolidated the levels to ten total rooms within the same environment. This allows users to discover movement and shooting mechanics in a basic sandbox setting.

We focused our sights on ranged combat and removed melee combat as a whole. Enemy scripted behavior was created yet not fully realized into in-game enemies. Boss fights and developer-made music were also scrapped.

These were necessary calls that needed to be made. Reality is that team capacity and consistency didn't align with our original projection. What we're delivering is smaller in scope, but makes up for in complete and functional foundation that will be a breeze to expand on.

Thank you for understanding, I am happy to walk you through revisions in detail at your convenience,

Best Regards,

Dev Team
